RESEARCH STATEMENT

My research activity lies at the intersection of Artificial Intelligence and Robotics, and is focused on scenarios related to human-robot interaction or collaboration. To this aim, I explore the use of different sensing modalities, semantic-oriented data processing techniques, knowledge representation and reasoning approaches, as well as action strategies to design cognitive architectures aimed at increasing robots' autonomy and intelligence, which leverage innovative models of cognition and computation. All these aspects are integrated in the design of state-of-the art computational solutions, which I deem fundamental to design the robots of the future.
