Research interests

My research interests fall within the field of macroeconomics. In particular, I studied the processes of the financial markets by investigating the reasons for the speculative bubbles and the behavior of investors on the stock market. I also studied macroeconomic models with oligopolistic enterprises, with processes of entry / exit of new firms, in order to deepen the economic cycle and the effects on it of social mobility. I am also interested in health economics, the effect of public spending and investment policies on the health of the population. I also work on the effect of technological progresses, especially the development of artificial intelligence, on the labor market, on the distribution of income and on the electoral cycle. Finally, I deal with developing forecast macroeconomic models of regional GDP.

Grants

2021 - 2022

La costruzione di un modello econometrico previsionale per stimare il PIL regionale ligure unapplicazione utilizzando la banca dati CPT

University of Genoa and Region Liguria - IT

Participant

This project was born on the initiative of Region Liguria from the need to equip itself with forecasting tools useful for studying the trend of regional

GDP. The research project describes in detail a regional macro-econometric model, its general structure and its properties, especially the response functions of the economy to shocks introduced in the model to simulate regional or central government interventions (Rome).

2022 - 2023

La costruzione di un modello econometrico previsionale per stimare il PIL regionale ligure unapplicazione utilizzando la banca dati CPT

Region Liguria - IT

2023 - 2024 ONGOING

La costruzione di un modello econometrico previsionale per stimare il PIL regionale ligure unapplicazione utilizzando la banca dati CPT

Region Liguria - IT
